YOUR KEY SOLUTION TO A WORLD WITHOUT GLASSES

AMAZING VISION THAT
CHANGES YOUR LIFE!

DO YOU HAVE THESE

VISION PROBLEMS

AFTER THE AGE
OF 50?

After the age of 50, things seem to change a lot. Your eyes and your vision is one thing that changes rapidly at this age. **You may find yourself struggling with one or more of these symptoms:**

Can't reading menus, books, price tags or your smartphone properly

Frustrated with switching eyeglasses like a crazy person, even in your basic daily life

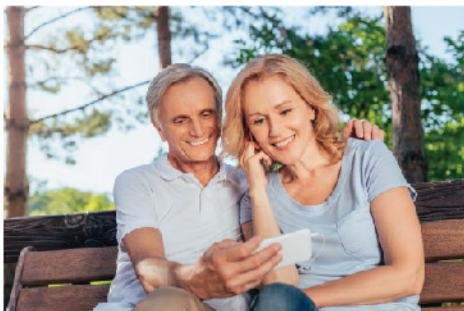

Difficulties to perform your activities or playing sports with eyeglasses

Spend (a lot of) your money for changing eyeglasses every couple of months

Keep losing your eyeglasses

Some people are OK with these situations. But if you are like most people, you may feel very frustrated, because these visual problems have become major limitations to your life. This makes your simple daily life unnecessarily more complicated than it should be.

BETTER VISION MEANS CHANGE FOR A BETTER VERSION OF YOUR LIFE.

Imagine, if there is the solution that's not only about the vision, but also can changes your life. If there is something that could break all limitations and expose you to new possibilities for many activities that you couldn't do before. Let's consider how it would be nice if you could enjoy your daily life, swimming, playing tennis, doing your favorite hobbies, cooking, seeing price tags, reading menus, using your smartphone or computer (the list can go on and on...), all these with your very own eyes and keep the need of eyeglasses to a bare minimum.

IT'S A CLEAR WORLD AHEAD!

With advancement of technology and state-of-the-art techniques, Our **"BrightView Surgery"** refocuses your vision by changing the focusing power of the eye's lens. This is done by replacing your natural lens with **"an artificial Multifocal IntraOcular Lens Implant (Multifocal IOL)"**. These lenses are surgically implanted during a short minimal invasive procedure.

"BrightView Surgery" is different from Lasik and other procedures because of its 2 major benefits. First, it provides you with both distance and close-up vision, which means after the procedure, the possibility to see and do things with your own eyes in all distances is essentially possible. Second, the lens implant itself is durable and will last a lifetime.

BrightView Surgery has been done in more than 1,000 procedures by **"Dr. Captain Wiriyaluppa"** our leading eye surgeon since 2009; with great success and prove to be very safe.

A photograph of a woman with short, wavy blonde hair, smiling warmly. She is wearing a white, long-sleeved, lace-up top. She is holding hands with several other people whose hands are visible in the foreground, suggesting a group of friends or family. The background is a bright, sunny beach with waves crashing onto the shore. The overall mood is joyful and carefree.

SO, **ARE YOU OVER 50** AND USING SPECTACLES TO READ THIS ARTICLE?

Do you hate your reading glasses? If so, help is at hand! This is BrightView Surgery (not to be confused with LASIK). If you want to know more, contact Dr. Captain at BrightView Center and reduce your dependence on contact lenses or glasses. You will be amazed.
